DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND DEVELOPMENT (25CS1302E)

Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No- 8	Team No- 16	Project Title- Lost & Found Item Tracker For Campus
-----------	-------------	---

1. Abstract

The Lost and Found Item Tracker for Campus is a database-driven system designed to help students and staff easily report, search, track, and recover lost and found items within a campus. The system allows users to report lost or found items by entering important information such as item name, description, category, date, location, and current status. All records are stored in a structured MySQL database, making the information easy to manage, search, and update. Users can search for items based on different details and identify possible matches between lost and found records. A claim feature is provided so that users can request an item and verify their ownership before it is returned.

The system uses Node.js and Express.js for backend development and provides a structured way to handle user requests and database operations. Various database concepts, including tables, relationships, SQL queries, joins, subqueries, normalization, transactions, and indexing, are used to maintain accurate, consistent, and efficient data. The system also updates the item status when an item is claimed, verified, or successfully returned to its owner.

Overall, the Lost and Found Item Tracker provides a reliable, organized, and user-friendly solution for managing lost and found items on campus. It reduces the difficulty of manually searching for misplaced belongings and improves the chances of returning items to their rightful owners.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030372	CH. Hasika	
2520030154	P. Bhavana Manaswini	
2520030400	V. Srikruthi	

3. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

Category	Technology / Tool	Purpose
Frontend	HTML5, CSS3, JavaScript	Develop the user interface for reporting and searching lost/found items
Backend	Node.js	Server-side application development
Database	MySQL	Store users, lost items, found items, locations, claims, and status information
Database Tool	MySQL Workbench	Database design, SQL queries, ER diagrams, and execution-plan analysis
Repository	GitHub	Store and manage the project source code
Development Environment	Visual Studio Code	Visual Studio Code
Query Analysis	MySQL EXPLAIN / EXPLAIN ANALYZE	Analyze query execution plans and performance

Guide Name and Signature (remarks if any) _____
